

Fiberglass Tissue Paper

Fiberglass Surfacing Tissue is characterized as uniform fiber dispersion, smooth surface and fast resin impregnation. It is mainly used in the surface layer of FRP products of which the capability is ameliorated. It is capable of significantly improving the strength of FRP surface layer, strong impaction resistance, excellent uniformity of surface, good covering up the texture of under layers and good corrosion resistance.

Application:

This product is to be fixed with wall paper glue and can be painted afterwards. The smaller cracks on the wall disappear and makes the wall impact resistant.

Specification:

Weight (m2)	Length	Color	Packing
35g, 40g, 45g	25m-100m	White (standard) other colors	Each roll packed into plastic bag, 20 or 40 rolls per one carton

***Specific products could be made according to customers' requirements.**
